Convoitec Global VoIP "One Number" Solutions

You will never have to worry about giving out your mobile number again! With the Convoitec Global VoIP "One Number" Solution you can setup your dial plan to meet your needs.

(1) A person dials your DID (Direct In Dial Number) and then your Extension number or dials your SIP address.
(2) The connection will go to the Convoitec SIP Switch which controls your Dial Plan.
(3) You can now have the Convoitec SIP Switch direct your calls in any way you like. For example it might ring your VoIP phone at your office first. Then if that does not answer in 20 seconds it will start to ring your mobile and your laptop soft phone. If nothing has answered for another 20 seconds then it can dial out through the POTS (Plain Old Telephone System) to your home number. You can even have multiple plans and switch between them - so you can have multiple mobile phones in different countries for example.
(4) Finally if nothing answers then the system will switch the call to the Convoitec Asterix Voice Mail Server. In this way you will never miss a message and you will never have to give out lists of numbers again!
